DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

1. Claims 1-21 are rejected under 35 U.S.C. 102(a) as being anticipated by Crowther, J et al (EP 1,113,656). Hereinafter, referred to as Crowther.

With respect to claims 1-2, 7-8, 13-14, and 17-18, Crowther discloses in Figs. 6-8, the queuing mechanism of the multimedia queuing manager for queuing incoming messages (storing the communications transmissions according to the classification category assigned thereto) via the packet data network as shown in Fig. 5 (establishing classification categories for a variety of communications transmissions effected via a packet data network). Further, as shown in Figs. 6-8, incoming messages are prioritized in the pending queues (establishing priority sequencing guidelines for the classification categories). Crowther discloses in Fig. 5, messages received at the network interface 122 from the customer 260 via the network cloud 172 (receiving at least one communication transmission via the packet data network). Crowther discloses in Fig. 6 that an incoming email is queued in SalesEmail pending queue (assigning a classification category to the communications transmission).

With respect to claims 3-4, 9-10, 15, and 19, Crowther discloses in Figs. 6-8 that an email is presented to the agent (selecting and presenting one of the stored communications transmissions for presentation to a user).

With respect to claims 5, 11, 16, and 20, Crowther discloses in Fig. 4, once the call arrives at the PBX 120, the media gateway routes and connects the call to an agent (generating a signal to alert a user of the receipt of a communication).

With respect to claims 6, 12, and 21, Crowther discloses in Figs. 6-8, signals are generated to alert the agents of the incoming messages, wherein such messages are to be processed according to its priority (generating a separate signal for each classification category or user defined amalgamation of classification categories to alert a user of the receipt of a communication belonging to each said category or belonging to the user defined amalgamation of various classification categories).
